

The ADF Experience Q1 Newsletter 2021

Step Outside Your Comfort Zone—With Piping 1-2-3

ADF is changing the way our clients think about onsite building. Our new **Engineer, Prefab, Install** method known as Piping 1-2-3, is a synergistic three-step approach providing a quicker, cost-effective alternative to traditional onsite construction.

Step 1: Engineering—ADF Engineering works with your team to understand and clearly define your process, challenges, goals, and budget. We then proceed with 3D laser scanning to develop the accurate drawings needed for a precision fit.

Step 2: Prefabrication—Our skilled contractors fabricate the majority of the specified piping in their controlled shop environment to maximize quality and adherence to engineering specifications.

Step 3: Installation—Our strategic piping contractor completes the work by expertly assessing the installation process, troubleshooting, and installing the piping at your location.

Try our Piping 1-2-3 method on your next project and we're confident you'll never look at onsite construction in the same way. **Are you ready to step outside your comfort zone?** It's as easy as 1-2-3! [Learn more about ADF's Piping 1-2-3 method.](#)

ADF Welcomes Project and Construction Manager Robin Selhorst

ADF is pleased to welcome Robin Selhorst to oversee our construction management team. Robin has worked in industrial construction management for over twenty years, bringing his wealth of knowledge and experience to our company. This new service we are offering will ensure that engineering design and intent is properly followed and documented throughout the process. [Read more about Robin.](#)

ADF at the 2021 AOCS Annual Meeting & Expo

ADF is proud to have two of our engineers speaking at this year's AOCS Meeting & Expo. Rakesh Patel will present a tailored approach to help Oilseed facilities optimize water use and reduce their footprint. Matt Williamson will discuss how to successfully integrate organic oilseed manufacturing into existing operations. [Visit our website for more information.](#)
